Mobile: +91 6204566381

Skills

Languages:	C++, JavaScript, C, PHP, Python
Frameworks:	HTML and CSS, Bootstrap, NodeJS, ExpressJS, ReactJS, Django, Laravel
Tools/Platforms:	MySQL, MongoDB, VS Code, Thunder Client, MS Office
Soft Skills:	Problem-Solving, Team Work, Adaptability

Projects

Inkwell – Real-Time Collaborative Editor | *React.js, Django, Django Channels, WebSockets, CRDT* **|** LINK — Oct' 26

- Built a real-time collaborative text editor where several users edit one document at once, with live cursors, presence and automatic reconnection.
- Implemented a custom RGA CRDT so concurrent edits merge identically on every client, with offline editing, resend after reconnect, and a heartbeat that repairs dropped messages.
- Verified correctness with randomized concurrent-editing tests and a live end-to-end check; the Python and JavaScript versions replay the same operation log to identical text.

SprintDesk – Sprint Board & Bug Tracker | *React.js, Node.js, Express.js, MongoDB, JWT* **|** LINK — Oct' 26

- Built a full-stack sprint planning and bug tracking app where teams create projects, plan sprints and move tasks and bugs across a drag-and-drop Kanban board.
- Designed RESTful APIs with JWT authentication and role-based access (admin, developer), enforcing rules such as one active sprint per project and one-step ticket status moves.
- Implemented ticket assignment, priorities, filters, comments and a sprint progress bar, and wrote Jest unit tests for the board workflow rules.

CodeForge – Online Judge Platform | *React.js, Node.js, Express.js, MongoDB, REST APIs* **|** LINK — Jul' 26

- Developed a full-stack online judge platform with secure JWT authentication and a responsive React.js interface.
- Built RESTful APIs for coding problems, code submissions, test case evaluation (including hidden test cases), and user progress tracking.
- Implemented automated code execution and result evaluation with runtime and memory metrics using a modular backend architecture and MongoDB.

Virtual Experience (Forage)

Electronic Arts – Software Engineering Job Simulation | LINK — Sep' 25

- Completed a simulated EA Sports task: proposed a College Football gameplay feature, designed class diagrams, and wrote OOP-based C++ header files.
- Found bugs in the provided legacy code and improved its performance using efficient data structures and cleaner coding practices.

AWS APAC – Solutions Architecture Job Simulation | LINK — Sep' 25

- Designed a scalable hosting architecture on AWS Elastic Beanstalk for a simulated client, covering high availability and deployment.
- Explained the design, cost breakdown and trade-offs, and proposed load-balancing strategies to reduce latency and handle traffic spikes.

Certificates

Elite-certified in Cloud Computing (NPTEL, IIT Kharagpur). | NPTEL — Oct' 25

Oracle Cloud Infrastructure 2025 Certified Developer Professional | Oracle — Sep' 25

Achievements

Achieved multi-language proficiency badges on HackerRank platform. — Feb' 26

Maintained consistent LeetCode coding streak and activity with acceptance rate 77.78%. — Feb' 26

Solved 175+ LeetCode problems with growing proficiency. — Jan' 26

Education

Lovely Professional University — Punjab, India
Bachelor of Technology - Computer Science and Engineering; ***CGPA: 6.5*** — *Aug'23 - Present*

SS Memorial University — Ranchi, Jharkhand
Intermediate; ***Percentage: 62%*** — *Apr' 22 – Mar' 23*

Central Academy School — Ranchi, Jharkhand
Matriculation; ***Percentage: 67%*** — *Apr' 20 – Mar' 21*
